WHEEL BEARINGS

TWIN TANDEM DESIGN WITH FACE SPLINES

Advantages

- Mass reduced by 10% due to the face splines
- Torque transmission increased by 50% by the face splines in comparison with the radial tooth set
- Economical assembly due to the face splines
- Friction reduced by 50% in comparison with the tapered roller bearing design
- Lower fuel consumption > reduction in CO2 emissions
- Rigidity increased by 10%
- Optimized operating life due to reduction in frictional wear in comparison with the tapered roller bearing design
